Dear Ad Sales Hiring Manager,

A friend and current employee of yours, Brendon Ramdeholl, recently told me about your opening for a Virtual Cross Road Internship this coming fall. I graduated with a Bachelor's in Computer Science at The University of Georgia, where I developed a passion for web development and created some projects of my own using many of the most popular technologies used today. I saw this internship as an opportunity to apply my knowledge and with my teamwork, organizational, and web development skills, I believe I can help design and develop the features needed to support the modernization of Crossroad.

I was instantly drawn by the technologies listed in the job requirements; many of these technologies I've loved using and some of them are ones I'm very interested in learning. As an aspiring full-stack developer myself, I love working on both ends in the stack. Starting out with creating single-page applications with HTML, CSS, and JavaScript, to creating my first full-stack application, I was inspired by the many things you can do developing for the web. After creating my first application on the React framework, I learned how to create servers and APIs on the back-end using Node and Express. I took it a step further by learning to use databases, such as PostgreSQL and Google Firebase. I love learning new technologies that I can use to improve my projects and I would like to continue my learning through this internship, where I hope to learn technologies like TypeScript and C# and add them to my skillset.

Prior to graduating, I also worked as an IT intern for IHG, primarily assisting the asset management team with the transition of the corporate asset database onto the ServiceNow platform. I resolved some technical issues within the database, including duplicates and false data, and implemented new measures of collecting asset data in order to minimize any errors in the future. During this, I gained solid analytical, organizational, and problem solving skills while working for a Fortune 500 company. I also reached out to some of the company's senior web developers, and they gave me the opportunity to shadow them for a few weeks. I learned about various aspects of the SDLC, the scrum methodology, unit testing, and debugging. Web development is my passion, and I would like to opportunity to bring that passion over to WarnerMedia and contribute to the company's success.

I've attached a copy of my resume as well as links to my GitHub and portfolio, where I highlight some of my personal web projects. I am readily available via email or phone for an interview. Please do not hesitate to contact me if you have any questions regarding my background. Thank you for your time and consideration and I look forward to hearing from you soon.

Sincerely,  
Joshua Villacorta
